**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1-4 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Madden et al. (US 6,249,076). Madden shows (fig. 4) an actuator consisting of a conjugated polymeric material (col. 1, ll. 15-18), whereby said material expands when an electrical voltage is applied between two locations thereof (18, 36) and contracts when the electrical voltage is reduced. Said conjugated polymeric material comprises polyaniline (col. 3, ll. 52-53). A method of actuation comprising the step of directly electrically stimulating a conjugated polymeric material (12) at two locations (18,36) thereof. As noted said conjugated polymeric material (12) comprises polyaniline.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kaneto et al. (US 5,556,700). Kaneto shows (fig. 2b) an actuator consisting of a conjugated polymeric material (12 or 14 or both), whereby said material expands when an electrical voltage is applied between two locations thereof (22, 24) and contracts when the electrical voltage is reduced. Said conjugated polymeric material comprises polyaniline (see ABSTRACT). A method of actuation comprising the step of directly

electrically stimulating a conjugated polymeric material (12 and/or 14) at two locations (22, 24) thereof. As noted said conjugated polymeric material (12 and/or 14) comprises polyaniline.
